

## FullStack Web Developer - Frontend + Backend + Cloud

## CONTACT INFO

 <https://mistrysaurabh.github.io>

 (+91) 9724922772

 saurabh.sept18@gmail.com

Vadodara , Gujarat , India 

## ABOUT ME

 8.7+ years IT Experience

 Great Quality Website Development

Performance , Scalability , Security | MEAN Stack , MERN Stack , AWS

 Driving Business-Centric Tech Solutions

Work domains : Health care , Sports care , E-commerce , Food Business , Social media , Digital Advertising Block Chain , Vehicle Management System

## OVERVIEW

| AREA     | TECHNOLOGY                                                                                                         | EXPERIENCE |
|----------|--------------------------------------------------------------------------------------------------------------------|------------|
| Backend  | <br>NodeJs , Express ,<br>Fastify | 8.7 years  |
| Backend  | <br>Laravel                     | 1 year     |
| Frontend | <br>Angular                     | 4+ years   |
| Frontend | <br>React                       | 5+ year    |
| Frontend | <br>VueJs                       | 2 years    |
| Database | <br>MongoDB                     | 4+ years   |
| Database | <br>MySQL                       | 3.5+ years |
| Database |                                 | 3 years    |

## FRONTEND SKILLS

|                                           |                                                                                         |
|-------------------------------------------|-----------------------------------------------------------------------------------------|
| <b>Core Frontend</b>                      | HTML5, CSS3, JavaScript (ES6+), TypeScript                                              |
| <b>Frameworks &amp; Libraries</b>         | React.js, Angular, Vue.js, Next.js, Remix, Gatsby                                       |
| <b>State Management</b>                   | Redux, Zustand, Vuex, NgRx                                                              |
| <b>Styling &amp; UI Libraries</b>         | SASS/SCSS, Tailwind CSS, Material UI, Ant Design, Bootstrap                             |
| <b>Frontend Architecture</b>              | Micro-Frontends, Monorepos (Nx, TurboRepo), Atomic Design, Component-Driven Development |
| <b>Build &amp; Bundling Tools</b>         | Webpack, Vite, Babel                                                                    |
| <b>API &amp; Data Handling</b>            | REST APIs, GraphQL (Apollo/Relay), Fetch API, Axios                                     |
| <b>Realtime &amp; Communication</b>       | WebSockets, Socket.io, SSE                                                              |
| <b>Authentication &amp; Security</b>      | JWT, OAuth2, SSO, Role-Based Access                                                     |
| <b>Performance Optimization</b>           | Code Splitting, Lazy Loading, Caching Strategies                                        |
| <b>Testing &amp; Quality</b>              | Jest, React Testing Library, Cypress, Playwright, Mocha, Storybook (visual)             |
| <b>DevOps &amp; Deployment</b>            | Git, GitHub/GitLab/Bitbucket, CI/CD pipelines, Docker (basic), Nginx                    |
| <b>Cloud &amp; Hosting</b>                | AWS (S3, CloudFront), GCP, Azure Static Web Apps, Vercel, Netlify                       |
| <b>Monitoring &amp; Analytics<br/>SEO</b> | Sentry, Google Analytics, GTM                                                           |

|                      |                                         |
|----------------------|-----------------------------------------|
|                      | On-page SEO, SSR/SSG optimizations      |
| Tools & Productivity | Jira, VS Code, Postman, Chrome DevTools |

## BACKEND SKILLS

|                                |                                                                                                                                                                                           |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Core Backend & Language        | Node.js (ES6+), TypeScript                                                                                                                                                                |
| Backend Frameworks             | Express.js, Fastify                                                                                                                                                                       |
| API Development                | REST API Design, GraphQL (Apollo Server, Yoga)                                                                                                                                            |
| Architecture & System Design   | Microservices, Event-Driven Architecture, Clean Architecture                                                                                                                              |
| Messaging & Queues             | RabbitMQ, BullMQ, Redis Streams, AWS SQS                                                                                                                                                  |
| Databases & Storage            | PostgreSQL, MySQL, MongoDB, Redis                                                                                                                                                         |
| ORMs & Query Builders          | Prisma, Sequelize, Knex, Mongoose                                                                                                                                                         |
| Authentication & Authorization | JWT, OAuth2, RBAC, API Keys                                                                                                                                                               |
| Caching & Performance          | Redis, Memcached, CDN Caching, Query Optimization                                                                                                                                         |
| Realtime & Communication       | WebSockets, Socket.io, Pub/Sub                                                                                                                                                            |
| Serverless & Edge Computing    | AWS Lambda                                                                                                                                                                                |
| Testing & Quality              | Jest, Mocha, Chai, Supertest, Sinon                                                                                                                                                       |
| Logging & Monitoring           | Winston, Morgan, Prometheus, Grafana                                                                                                                                                      |
| Cloud & DevOps                 | AWS, Docker, Docker Compose                                                                                                                                                               |
| CI/CD & Version Control        | Git, GitHub/GitLab/Bitbucket, GitHub Actions, GitLab CI                                                                                                                                   |
| API Documentation              | Swagger/OpenAPI, Postman Collections                                                                                                                                                      |
| Security Practices             | Rate Limiting, CORS, SQL Injection Prevention, XSS Protection, Input Validation                                                                                                           |
| Scalability Patterns           | Load Balancing, Horizontal Scaling                                                                                                                                                        |
| Schedulers & Background Jobs   | Cron Jobs, BullMQ, Agenda, node-cron                                                                                                                                                      |
